

D800.31

Plan for Using and Disseminating Foreground

WP 800 Dissemination & Exploitation

Grant Agreement number:	FP7-FoF.NMP-609143
Project acronym:	ProSEco
Project title:	Collaborative Environment for Eco-Design of Product-Services and Production Processes Integrating Highly Personalised Innovative Functions
Funding Scheme:	IP
Date of latest version of Annex I against which the assessment will be made:	01.10.2013
Project co-ordinator name, title and organisation:	Ana Arroyo Tecnalia
Tel:	+34 946 400 450
Fax:	
E-mail:	ana.arroyo@tecnalia.com
Project website address:	www.proseco-project.eu
Start date of the project:	01.10.2013
Duration:	48 months
Document Identifier:	D800.31-Plan For Using and Disseminating Foreground – First Version
Revision	100
Date:	25.08.2015

1 Executive Summary

The purpose of the Plan for Using and Disseminating Foreground is to establish the future of the ProSEco project and the use of the valuable knowledge and results gained from it.

This deliverable summarizes the work carried out in the ProSEco project, Work Package 800 "Dissemination & Exploitation". It focuses in particular on task T820, i.e. aiming to set up the successful exploitation of the results both during the project lifetime but above all after the project has concluded.

This is the first version of the exploitation plan where a first set of exploitable results is defined and the strategy to exploit these results at consortium level and at individual partners' level is outlined. The main exploitable result of the project is the ProSEco platform, although some components of this platform have been identified as exploitable by themselves.

The identified results so far are the following:

- Result 1 : ProSEco platform
- Result 2 : Simulation tool
- Result 3 : Data-mining tool
- Result 4 : Collaboration platform
- Result 5 : Security Tool/Enforcement services
- Result 6 : Aml Selection tool
- Result 7 : Context Modelling tool
- Result 8 : Aml based monitoring
- Result 9 : Context monitoring/Extraction
- Result 10 : Eco-tool
- Result 11 : Methodology for Lean-based ECO-driven Product-service & Process Design
- Result 12: Knowledge Provision core service
- Result 13: Methodology for Aml systems definition/selection and Aml based monitoring
- Result 14: Methodology for context modelling and context extraction

The exploitation and sustainability of the ProSEco results is one of the key objectives of the project. To enable exploitation, this plan includes the results to be exploited, the stakeholders, the potential models of exploitation and an analysis of the fit between results, needs and requirements of our stakeholders, and the exploitation models.

Regarding the exploitation of the results after the ProSEco project, each partner has specified its own exploitation plan. The ProSEco partners' individual plans are defined and presented in this report, including information about result ownership, usage intentions, risk analysis, business models and market forecast.
